After the Deepwater Horizon oil spill, federal and state agencies came together to form the Deepwater Horizon Natural Resource Damage Assessment Trustee Council. The Trustees studied the effects of the oil spill on natural resources like wetlands, fish and birds. We developed a programmatic restoration plan for the Gulf of Mexico, released in February 2016 as part of a legal settlement with BP for up to $8.8 billion.

We are now coordinating as part of the trustee implementation groups for the Restoration Areas shown below.

The Trustee Implementation Groups are developing restoration plans and projects to accomplish the work needed to restore the natural resources injured by the Deepwater Horizon oil spill. Our actions are guided by our programmatic restoration plan.

In late 2016, we updated the standard operating procedures for the long-term management, implementation, and administration of settlement funds for natural resource restoration and posted them on our website. This April, we released our first annual report, which can be viewed via the DIVER database, and is also available on our website. The annual report includes updated information on restoration project activities, status, and budgets—as well as an overall financial summary report of funds allocated, expended, and unexpended for each restoration type and TIG. Also in April, we received the first of fifteen annual payments from the historic settlement reached in April 2016.
