

# DEEPWATER BP OIL SPILL

## Natural Resource Damage Assessment (NRDA)

### NRDA BY THE NUMBERS — January 2011

**Three federal agencies** (Commerce, Interior, Defense) and **five affected states** (Alabama, Louisiana, Florida, Mississippi, Texas) are co-trustees in the Deepwater BP Natural Resource Damage Assessment (NRDA) in the Gulf of Mexico.

NOAA's role in this NRDA began on **April 20, 2010**, in the hours immediately following the report of an explosion on the Deepwater Horizon mobile drilling unit.

By mid-May, NOAA and the co-trustees had formed more than **a dozen technical working groups** devoted to assessing damages to various types of natural resources, from our coastlines to the deep seas, and from plankton to porpoises.

The "Notice of Intent to Conduct Restoration Planning" (released by the co-trustees September 29, 2010) names **eight responsible parties**:

- BP Exploration and Production, Inc. ("BP")
- Transocean Holdings Inc. ("Transocean")
- Triton Asset Leasing GmbH ("Triton")
- Transocean Offshore Deepwater Drilling Inc. ("Transocean Offshore")
- Transocean Deepwater Inc. ("Transocean Deepwater")
- Anadarko Petroleum ("Anadarko")
- Anadarko E&P Company LP ("Anadarko E&P")
- MOEX Offshore 2007 LLC ("MOEX")

In most large oil spill cases, the total of samples collected from the field number in the hundreds.

As of January 20, 2011, NRDA teams have collected **28,229 total samples**.

These samples include those collected by **89 offshore research cruises** NOAA either has conducted or under way, and include:

- **13,677 water samples**
- **6,010 tissue samples**
- **4,506 sediment samples**
- **1,917 tarball samples**
- **827 oil samples**
- **783 soil samples**

**More than 10,000 (11,631) analyses** have been validated and made available to the public.

Our teams have **surveyed about 4,215 linear miles of shoreline**.

Our teams have documented a cumulative **1,053 total linear miles of oiled shoreline**.

Our teams are reporting that **83 miles of shoreline currently are heavily or moderately oiled**.

Photos represent important data: NRDA teams had logged **more than 35,000 images**.

NRDA teams have deployed **several hundred research transmitters in wide-ranging species** like whale sharks, bluefin tuna and sperm whales.
